# Cloud Migration :
## Key considerations

### Everyone is adopting cloud

It's not necessary that you should migrate all of your workload to public cloud because others do.

### Reduced Costs

The TCO may come down only in the long run unless you are cloud native from Day1.

### Scalability & High-Availability

Not every service has the same level of availability in Public cloud. Costs might also increase based on business/application requirements

### Security

It's a misconception that migrating the applications to public cloud ensures end-to-end security for the applications and data
